Class' numberformatter not found laravel

file (/Applications/XAMPP/xamppfiles/etc/php.ini)- You can check if intl was successfully installed Check in PHP info anarnmunshi wrote: How to edit php.ini file in cel ? You can't. Originally wrote Cpanel /frontend/x3/php/index.html?lang PHP Server Administrator configuration can configure these PHP configuration settings. The system displays them only for reference. If you or any of your people have access to WHM (cPanel owner panel), they may be able to. Otherwise it's a hack through the terminal and that cancellation guarantee if you know what I mean. ☺ Keep in mind that some ini settings may be changed during execution using ini_set(). Finally, you should really try to figure out how to place a new thread rather than hijacking this. Look for a button that says: Start discussion ... which you think is green. How to configure and adapt Aimeos-based stores as developer forum rules Always add Aimeos and PHP versions, as well as your environment (Linux / Mac / Win) Aimeos Administrator Posts: 4467 Joined: 01 Jan 1970, 00:00 Messages from aimeos »18 Oct 2019, 11:04 You have not installed php extension intl and you can check that with php -m at the command prompt. If you are using a different version of PHP for command line and web queries, make sure that the intl extension is also installed for this version. Composer refuses to install Aimeos if php intl extension is not installed, so most likely the extension is available in CLI, but not online. By the way: You should upgrade to Aimeos 2019.10 as versions are no longer supported. Your comment on this question: Your comment on this answer: I've been using this exact same code for ages, and I've never had any problem. Now all of a sudden he's stopped working. I read over the internet about this problem, and apparently apparently you need to install PHP 5.3 or higher, and the PHP intl plugin is installed. I have both of them, but I still feel a fatal error: the NumberFormatter class did not find an error when I use the following function: function format_item(\$value) { \$format = new \NumberFormatter('en_US', \NumberFormatter::CURRENCY); return \$format-&formatCurrency(\$value, 'AUD'); } Also here's a snippet from my php.ini file showing that I have php intl plugin installed: [intl] intl.default_locale = fr_FR ; This directive allows you to produce PHP errors with some error; occurs within intl functions. ; The default is 0, which does not generate errors. intl.error_level = E_WARNING I also have an extension = php_intl.dll in my php.ini and it's also in my directory. Why am I getting this error? Help! Error Error: Applcontroller\CampController class not found in C:\xampp\htdocs\campapp\src\dependencies.php on line 33 of the command. Questions and qualities for work. Stack overflow for teams is a private safe place for you and your colleagues to search and share information.
